¹ Some hybrids were not included in all the plots. Interpolated values were used to determine the "7 Plot Average" when these data were missing. When interpreting the data, realize that the 7 plot averages using missing/interpolated data are not as "strong" as they would be for averages where there are no missing data. Also, lodging scores were not taken for the Pike Township Section 4 replicated plot. Lodging scores are a 6 plot average. Scores are from 10 to 1 with 10 being best standability.
