

CORN PRODUCTS

Rx 09-60 SS RIB 109 MATURITY

Use where plant diseases can be managed for top yields.

- High-yielding hybrid that responds to management
- Racehorse that responds to / needs fungicides, plant health is more marginal
- Related to Rx 12-58 SS and Rx 12-60 SS, but drier and even more yield
- Good drought tolerance (better than Rx 12-60 SS but not as good as Rx 12-58 SS)
- Avoid fields where Physoderma node breakage has been a problem as it is weak against it
- Good stalks and very good roots
- Greensnap is average
- Can go corn-on-corn, but really needs a fungicide

SmartStax
RIB COMPLETE

Rx 12-58 SS RIB 112 MATURITY

Plant as a go everywhere hybrid with no big weaknesses.

- Widely adapted but works best in variable to tougher conditions
- Very good drought tolerance
- Good plant health
- In our Demo Plots this has performed well and it doesn't have any big weaknesses agronomically
- Rx12-58SS has better drought tolerance than Rx12-60SS
- Very good stalks and roots
- Rx12-58SS goes north of zone well, Rx12-60SS works better south of zone
- Very good corn-after-corn

SmartStax
RIB COMPLETE

Rx 12-60 SS RIB 112 MATURITY

Grow in variable, but more productive environments.

- Widely adapted but better in productive soils
- Will respond to management
- Related to Rx 09-60 SS and Rx 12-58 SS
- Plant health is decent but fungicides should be strongly considered
- Good on seedling vigor, good on greensnap
- Average drought tolerance
- Southern rust resistance is below average
- Good stalks and very good roots
- Can go corn following corn, but fungicide use decisions become even more critical

SmartStax
RIB COMPLETE

Rx 14-36 SS RIB 114 MATURITY

Plant for good health and standability in the absence of fungicide.

- Medium stature with very good stalks and roots
- Better in high-to-medium yield environments, but can handle low-yield environments
- Very good overall disease package, although Goss's wilt is average
- Average drought tolerance
- Consistent deep kernel ears with excellent test weight
- Excellent choice for corn following corn

SmartStax
RIB COMPLETE

Rx 06-77 SSP RIB 106 MATURITY

Plant where corn rootworm has been a concern.

- Expresses a RNA-interference gene for rootworm control
- Great corn-on-corn option
- Very good stalks and roots
- Variable soil types, although it responds to ideal conditions
- Moves north and south of zone
- No big disease weaknesses, but NCLB, stalk anthracnose, and tar spot are average (monitor for fungicide use)
- Very good emergence
- Good drought tolerance

SmartStax PRO
RIB COMPLETE

Rx 09-31 SSP RIB 109 MATURITY

Use as a go everywhere hybrid that is less likely to require fungicide.

- Works great in low-yield as well as high-yield environments and works east to west
- Flex-ear hybrid but works great at average populations
- Seedling vigor is more average
- Very good stalks but average roots, stalk health is good
- Very good disease package including Physoderma, eyespot, and SCLB although southern rust is average
- Good drought tolerance
- Use caution with growth regulator herbicides
- Good staygreen and good fall intactness
- Works well corn following corn

SmartStax PRO
RIB COMPLETE

NEW!

Rx 13-68 SSP RIB
113 MATURITY

Solid and stable hybrid that works in virtually all environments and stands.

- Goes in all environments, including low- and high-yield environments, and also works in far northern or southern Illinois
- Very good drought tolerance
- Very good stalks and roots
- Very good overall plant health, although Physoderma node breakage is fair
- Very good stalk health, staygreen, and fall intactness
- Test weight is only average and below average for a 113 day hybrid
- Very good early vigor
- Solid and stable across years
- Works well corn following corn

NEW!

M 11-50 DV
111 MATURITY

Agronomically solid hybrid that works in nearly any environment.

- Overall solid agronomics
- Widely adapted, variable soil types, no-till, corn following corn
- Stands well with excellent stalks, decent roots and good plant health
- Very good on GLS and NCLB, and solid tar spot tolerance
- Available as Duracade® (above and below ground) or Agrisure® Above (above ground only)
- Semi-flex ear
- Great test weight and grain quality
- Performed well in our 2022 and 2023 Demo Plots

NEW!

Rx 12-51 VT2P RIB
112 MATURITY

Use where average seedling vigor is acceptable and a "go everywhere" hybrid works best.

- Good disease package
- Variable soil types, works on highly-productive or less-productive soils
- Seedling vigor is more average
- Very good late-season plant health and intactness
- Has ear flex and "toughness" that allows it to do well over a wider range of conditions and populations
- Above average drought tolerance
- Good test weight
- Will respond to fungicide use even though it is pretty healthy
- Goss's wilt is average, but this is an excellent corn-after-corn hybrid

Rx 05-37 TR RIB
105 MATURITY

Plant as an early hybrid that handles drought and stress but not corn-after-corn.

- Goes south well for a 105-day hybrid
- Versatile
- Very good drought and heat tolerance
- Good roots and average stalks
- Plant at moderate populations to maintain adequate but average stalk integrity
- Use caution with growth regulator herbicides
- Good disease package, but it does get Goss's wilt and stalk health is average
- Goss's wilt and average stalk health make corn following corn a concern
- Trecepta® hybrid (VT Double PRO® with the Vip3A protein added)

Rx 14-03 TR RIB
114 MATURITY

Plant as a widely adapted hybrid that excels at high populations on rotated fields.

- Wide footprint
- Tougher soils to highly productive
- Stands well
- Good drought tolerance
- Goes north
- Needs high plant populations to perform best
- Average stalk health that can allow late season stalk rots to come in, fungicide would help
- Trecepta® hybrid (VT Double PRO® with the Vip3A protein added)
- Not recommended for corn following corn

M 14-50 AA
114 MATURITY

Plant for good health and standability in the absence of fungicide.

- Agrisure Above® (above ground traits only) hybrid, although a Duracade® version is available
- Has Liberty® herbicide tolerance
- Very good stalks and good roots
- Good plant health especially late season
- Less likely to need or respond to foliar fungicides because of health
- Seedling vigor is generally adequate
- If planting corn following corn or into heavy residue, allow soils to warm some
- While this could go corn-on-corn, the Duracade® version would work better
- Good quality and good test weight corn
